Art Unit: 1724

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-21 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which Applicant regards as the invention. The claims contain numerous vague and indefinite expressions. For example, the terms: "allowing to separate" (claim 1, line 1), "intended for extraction" (claim 1, lines 7-8), "several" (claim 1, line 9; claim 8, line 2; claim 11, line 3; claim 14, line 1; claim 18, line 3), "allowing extraction" (claim 1, line 9), "the number of means ... intended for passage of fluid" (claim 4, line 10), "preferably" (claim 5, line 3), "exhibit a tangential type cutout" (claim 10, line 3), "exhibit a parallel type cutout" (claim 12, lines 1-2), "exhibiting a radial type cutout" (claim 14, line 2), "associated" (claim 14, line 3), "intended for injection of a diverted" (claim 18, line 1), "(feed, desorbent, ...)" (claim 18, line 5), "suitable sequence" (claim 18, line 5), "Application of" (claim 21, line 1), etc. are vague, and indefinite as to the operations intended.

Art Unit: 1724

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Hotier et al. (U.S. Patent No. 5,972,224) or Ferschneider et al. (U.S. Patent No. 6,146,537). Each of the references discloses a system for separating paraxylene from aromatic hydrocarbons of the type recited (see col. 9, line 54 of Hotier et al.; and col. 8, lines 22-23 of Ferschneider et al.) with a simulated moving bed system comprising a bypass line of the type recited (see col. 4, lines 14-18 of Hotier et al.; and col. 4, lines 26-30 of Ferschneider et al.) and a rotary valve see col. 10, line 26 of Hotier et al.; and col. 9, line 1 of Ferschneider et al.); and, in view of the indefiniteness of the claims, this is all that appears to be required by claims 1-21.

Callebert et al. (U.S. Patent No. 5,755,960) discloses a similar fluid separation system.
